1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Please amend claim 1 as follows:

1. A method for determining ~~the response of a gas in liquid concentration measurement device when measuring a concentration~~ a mathematical function representative of measured concentration versus actual concentration of a gas in a liquid when the gas is at a concentration in the liquid above ~~the~~ a solubility threshold for the gas in the liquid, the method comprising:

- obtaining the solubility threshold for the gas in the liquid;
- ensuring that the device is calibrated for concentrations of about 0% of the gas in the liquid and about 100% of the gas;
- using the device to conduct sufficient measurements of the gas concentration at known actual concentrations to permit generation of a first mathematical function representing device-measured concentrations versus actual concentration of the gas in the liquid below the solubility threshold of the gas in the liquid;
- applying the first mathematical function to deduce a theoretical device-response at about the solubility threshold; and
- using the theoretical device-response at about the solubility threshold and the device calibrated response at 100% gas concentration to determine ~~a second~~ the mathematical function

representative of the response of the gas-in-liquid concentration measurement device when the concentration of gas is above the solubility threshold, the second mathematical function defining the device-measured concentration versus actual concentration for the region above the solubility threshold wherein the actual concentration for the region above the solubility threshold includes ~~the~~ a solubilized amount of gas that is solubilized in the liquid and the gas that is present in the bubble state.

Please amend claim 5 as follows:

5. The method of claim 1 wherein the first mathematical function and the ~~second~~ mathematical function representative of the response of the gas-in-liquid concentration measurement device are linear.

Please amend claim 6 as follows:

6. The method of claim 1 further comprising generating a correction factor for use with the measurement device, the correction factor being the difference between a value of the first mathematical function or the ~~second~~ mathematical function representative of the response of the gas-in-liquid concentration measurement device and an actual gas concentration corresponding to that value and the difference is recorded and applied to any device-measured concentrations corresponding to the value.

Art Unit: 1743

Please amend claim 7 as follows:

7. The method of claim 1 further comprising generating a correction factor for use with the measurement device, the correction factor being generated as the inverse function of the first mathematical function and the ~~second~~ mathematical function representative of the response of the gas-in-liquid concentration measurement device.

Please amend claim 8 as follows:

8. A method for determining ~~the response of a gas in liquid concentration measurement device when measuring a concentration~~ a mathematical function representative of measured concentration versus actual concentration of a gas in a liquid when the gas is at a concentration in the liquid above ~~the~~ a solubility threshold for the gas in the liquid, the method comprising:

obtaining the solubility threshold for the gas in the liquid;

ensuring that the device is calibrated for concentrations of about 0% of the gas in the liquid and about 100% of the gas;

using the device to conduct sufficient measurements of the gas concentration at known actual concentrations to permit generation of a first mathematical function representing device-measured concentrations versus actual concentration of the gas in the liquid below the solubility threshold of the gas in the liquid;

determining a measured concentration at about the solubility threshold; and

using the measured concentration at about the solubility threshold and the device calibrated response at 100% gas concentration to determine ~~a second~~ the mathematical function representative of the ~~response of the gas in liquid concentration measurement device when the gas is in a bubble state in the liquid, the second mathematical function defining~~ device-

measured concentration versus actual concentration above the solubility threshold when the gas is in a bubble state in the liquid.
